

ChromeOS

Demo Mode

Installation and reset guide

About this guide

This guide will show you how to install and remove the ChromeOS demo mode on any ChromeOS device. The guide contains four different sections running you through the whole process.

To perform an installation of the ChromeOS Demo Mode you will need:

- A ChromeOS device that is running ChromeOS M105 or later
- A WiFi connection
- About 15 to 20 minutes of your time

Important: Before we begin

Before you begin with the installation process you need to make sure that the ChromeOS device is running on **ChromeOS version M105 or later**.

If the device is running ChromeOS M105 or later: continue to section 2 (*Page 12*)

If the device is running a ChromeOS version earlier than M105: continue to section 1 (*Page 5*)

If you are unsure which version the device is running: continue to section 1 (*Page 5*)

Table of contents

Section 1: Performing an update on a Chromebook	Page 3
Section 2: Installing the Demo Mode	Page 12
Section 3: Performing a Powerwash (reset) on a Chromebook that is using Demo Mode	Page 18
Section 4: Troubleshooting	Page 37

Performing updates

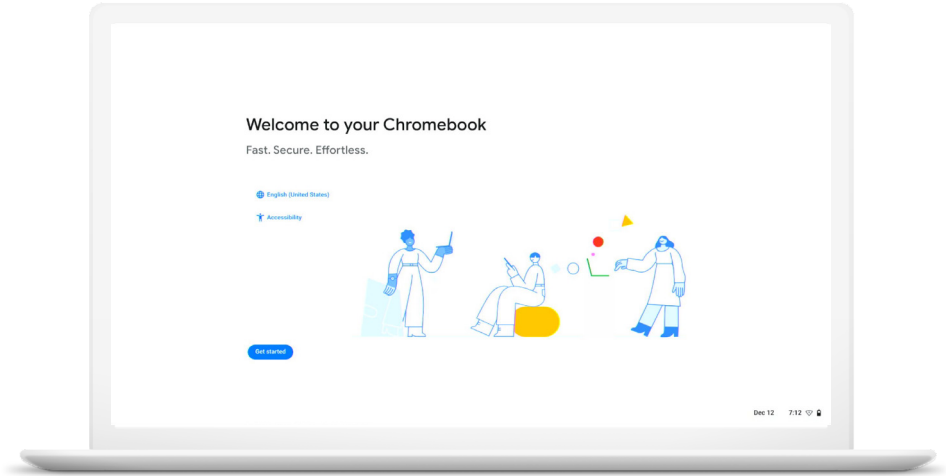

Performing an update

1. First boot up the ChromeOS device.

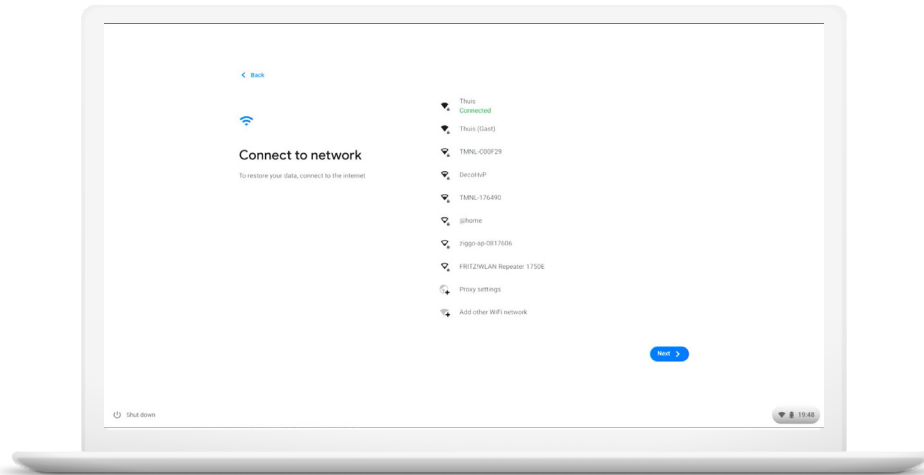

If you want to boot up a Chromebook for the first time after taking it out of the box you'll need to plug-in the charger first to activate the battery.

2. Select your desired language and press 'Get Started' to continue.

Performing an update

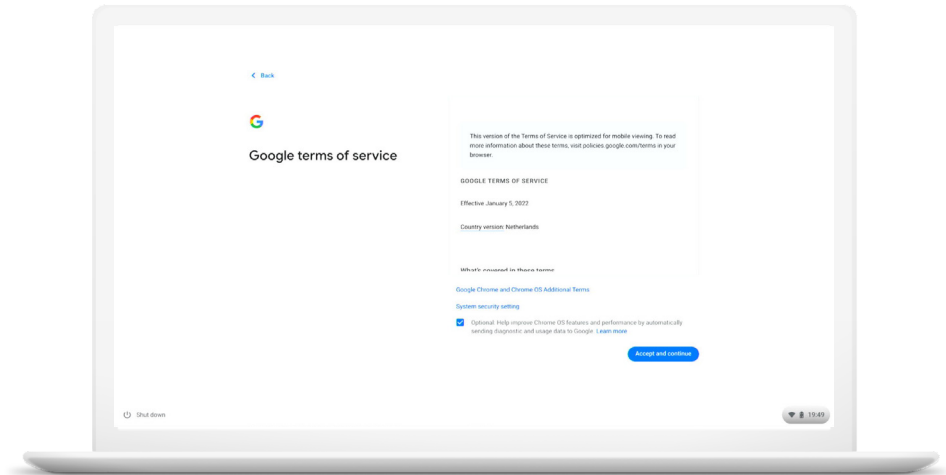

3. Now connect to the wifi network of the store.

If the wifi network requires a password you can ask a retail sales associate for assistance.

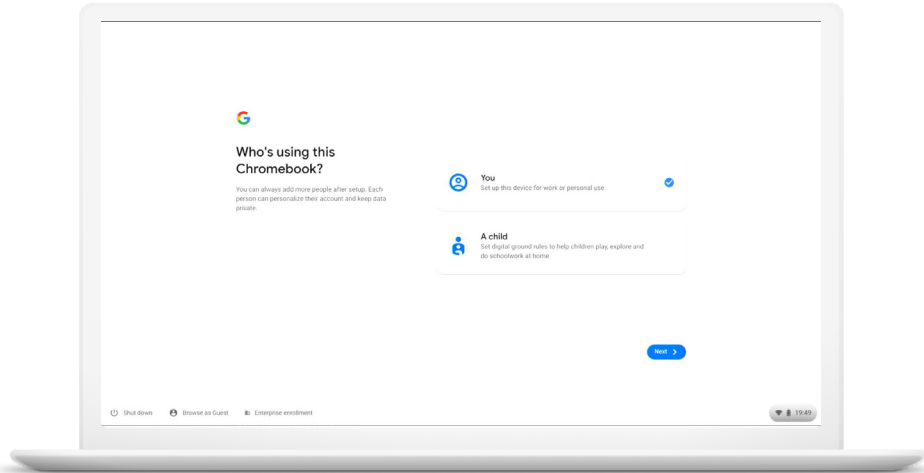

Try to avoid non-protected guest networks for the best experience.

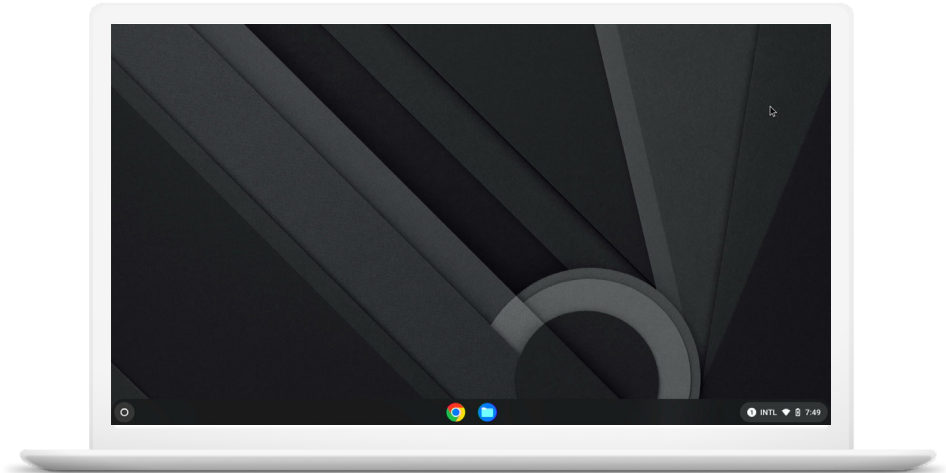

4. The next step is to agree with the terms and conditions.

You can select or deselect the option to send usage and diagnostic data and **press 'Accept to continue'** to continue the setup.

Performing an update

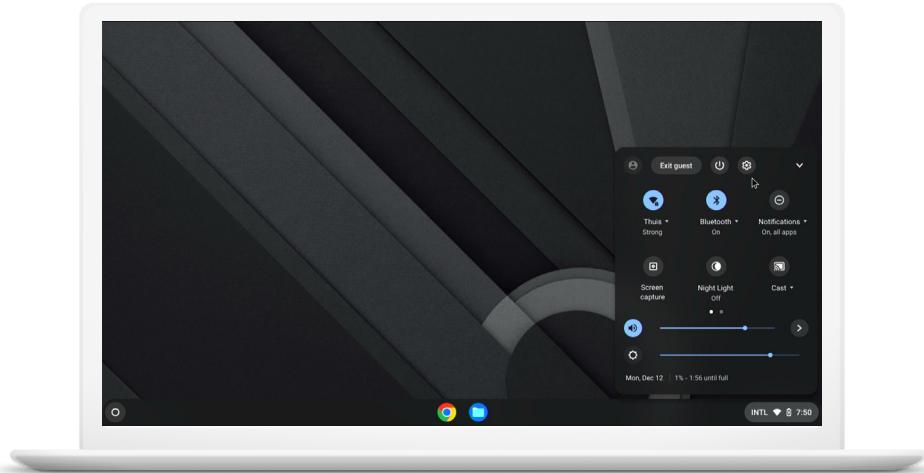

5. On the next screen we can select 'Browse as Guest' in the bottom left corner to enter the guest account on the ChromeOS device.

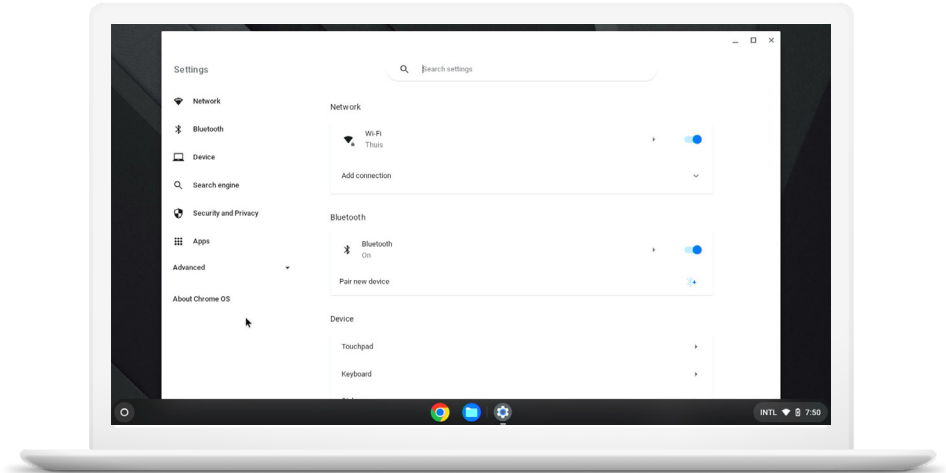

6. You are now using the guest account on the ChromeOS device.

Performing an update

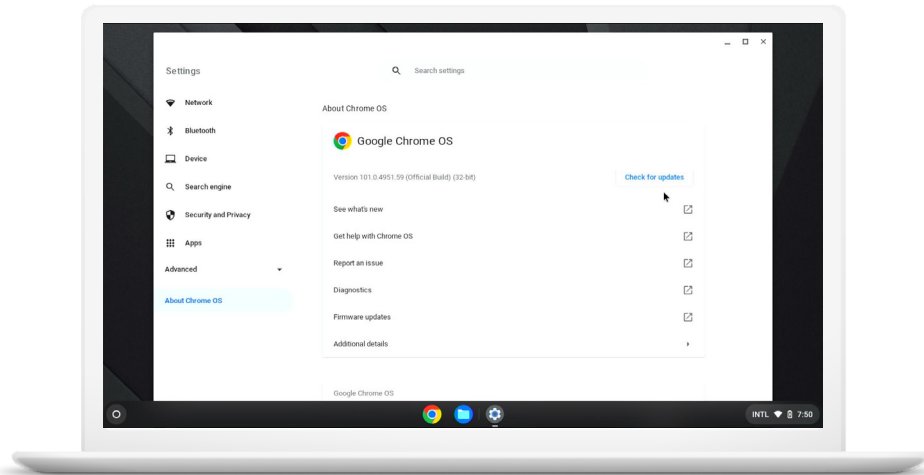

7. Go into the quick settings menu by clicking on the time in the bottom right corner.

Next press the settings cog icon at the top of the window.

8. The settings menu now pops-up.
Here you can select 'About ChromeOS'.

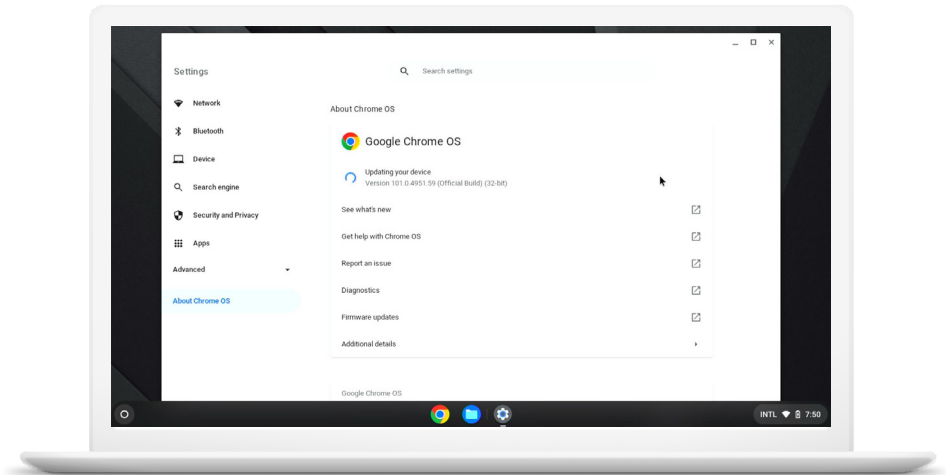

Performing an update

9. You can now check on which version of ChromeOS the device is running.

You can check for updates by clicking on 'Check for updates'.

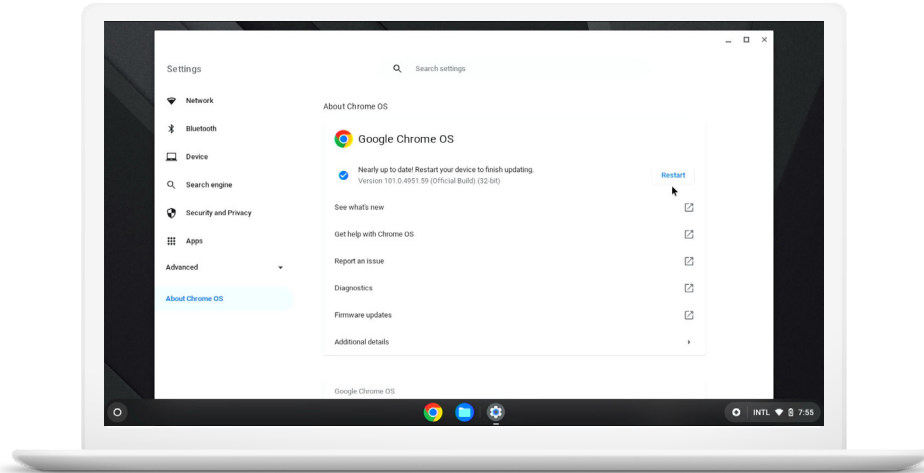

!!! You need to make sure the device is running ChromeOS M105 or later.

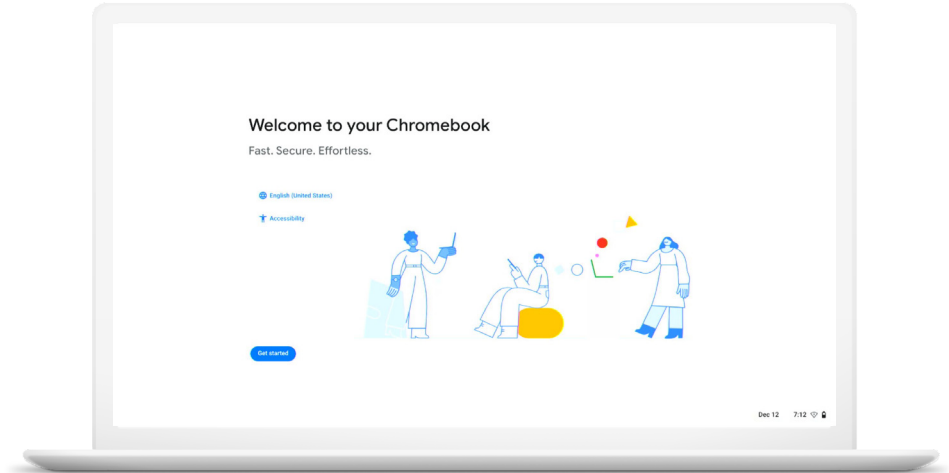

10. The device will now download the latest updates if there are any available.

!!! If the device is already up-to-date you can perform a Powerwash and start installing the Demo Mode. (See section 3 for Powerwash instructions)

Performing an update

11. After the update has been successfully downloaded you can press **'Restart'** to restart the device and install the update.

12. The ChromeOS device has now successfully been updated. You can now start the installation of the Demo Mode.

!!! *To make sure your device is running the latest version of ChromeOS you can always go back into the Guest account and double check.*

Installing the Demo Mode

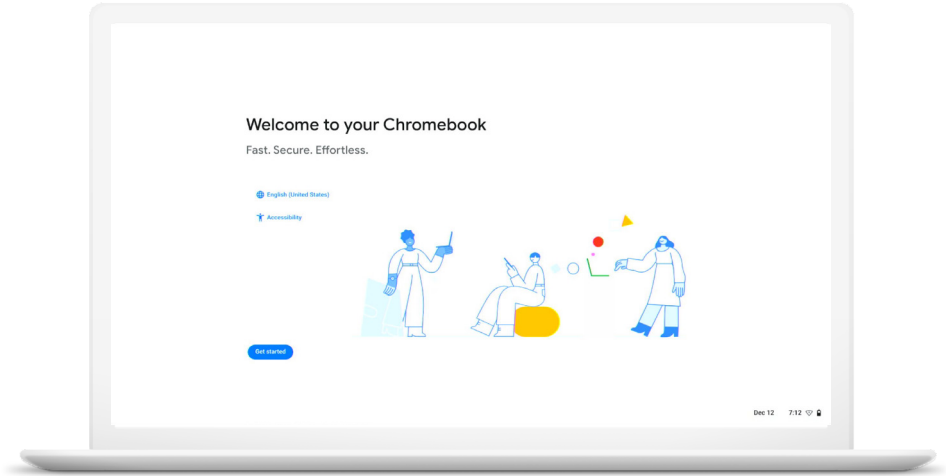

Installing the Demo Mode

1. First boot up the device.

If you want to boot up a Chromebook for the first time after taking it out of the box you'll need to plug-in the charger first to activate the battery.

2. On the start screen you simultaneously press the **CTRL + ALT + D** keys.

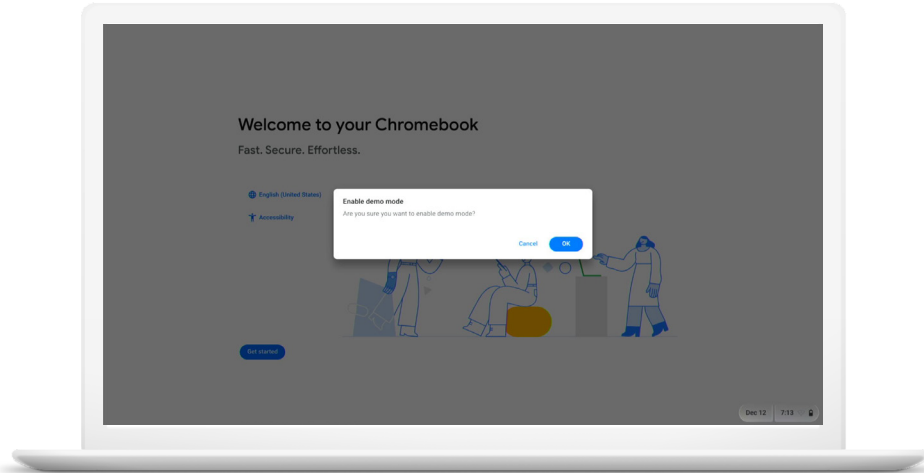

OR

Tap the middle of the screen **ten times** repeatedly.

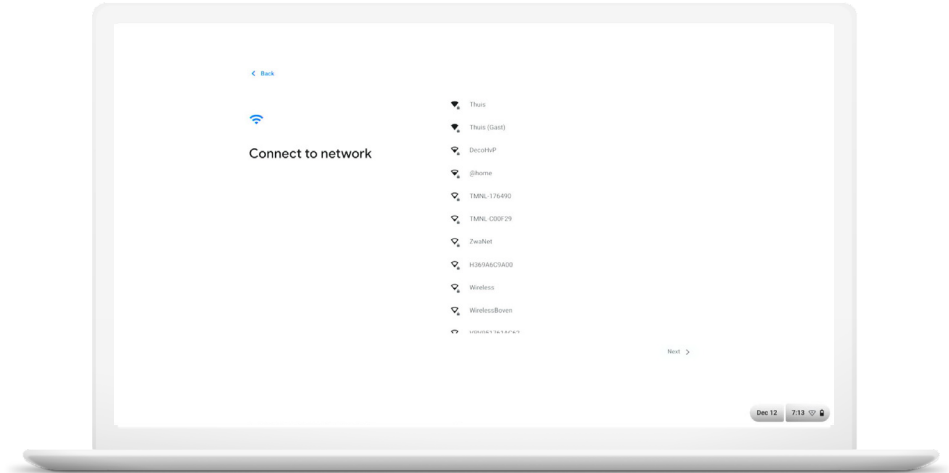

If you end up on the wifi selection screen after booting up the ChromeOS device you first need to perform a Powerwash (see section 2)

Installing the Demo Mode

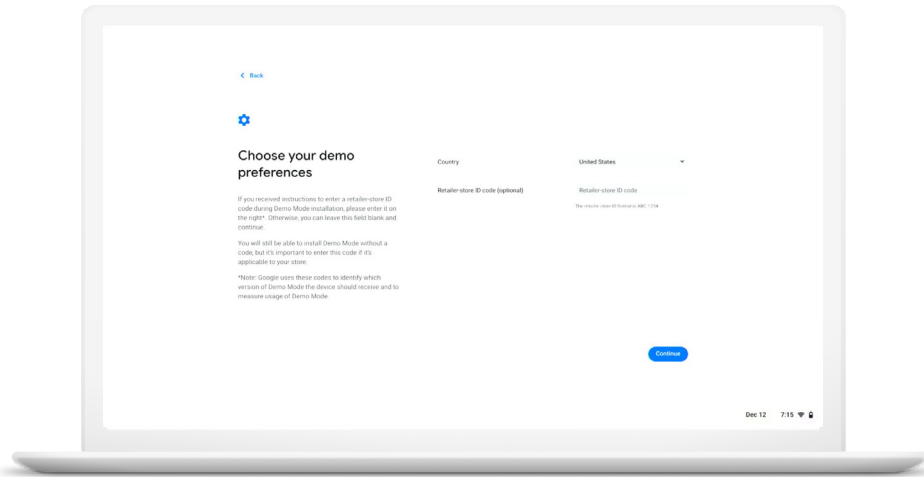

3. On the screen that now pops-up press 'OK' to confirm enabling the Demo Mode.

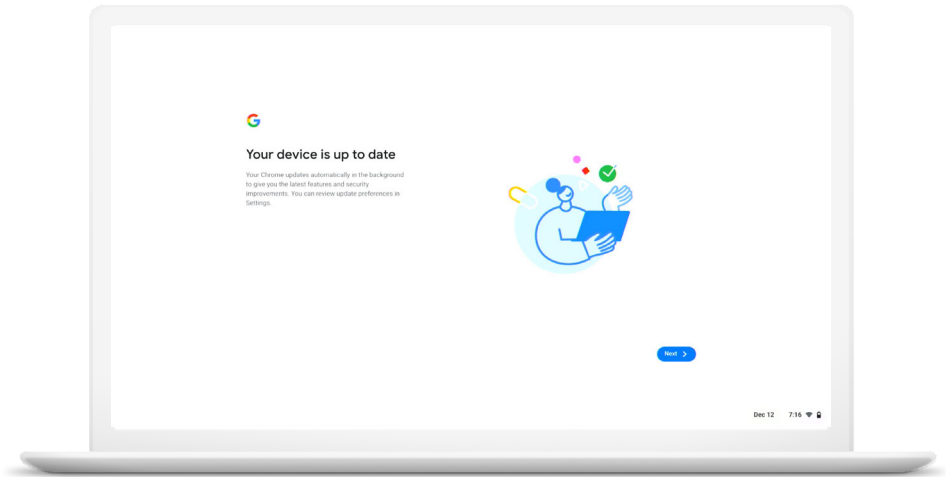

4. Now connect to the wifi network of the store.

If the wifi network requires a password you can ask a retail sales associate for assistance.
- !!! *Try to avoid non-protected guest networks for the best experience.*

Installing the Demo Mode

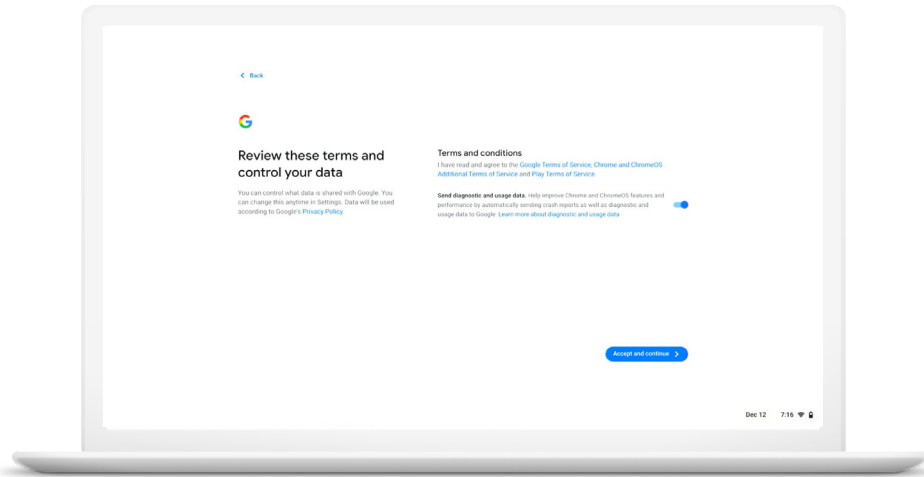

5. On the next screen select the desired country and (optionally) put in a Retailer-store ID code.

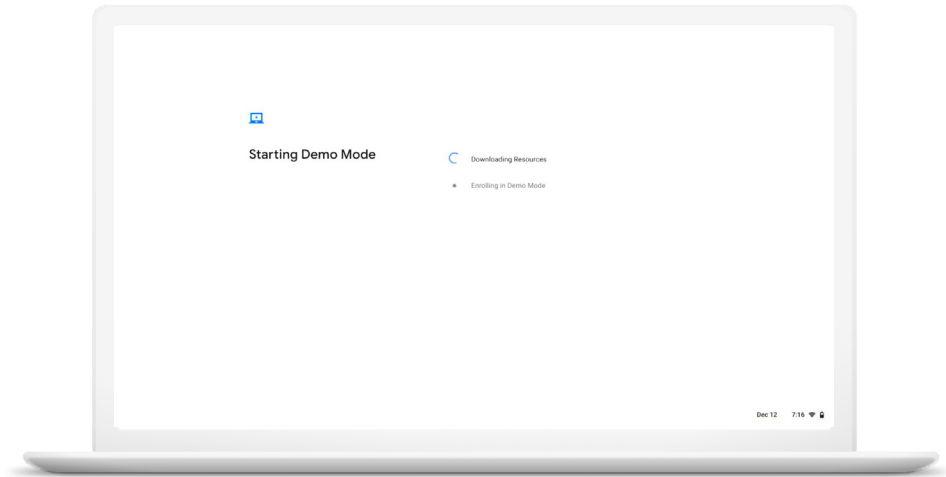

6. The device will now check for any updates. After the check is finished you can click 'Next' to continue.

!!! *If your device needs to update it will automatically install the update, reboot and bring you back to the start screen.*

Installing the Demo Mode

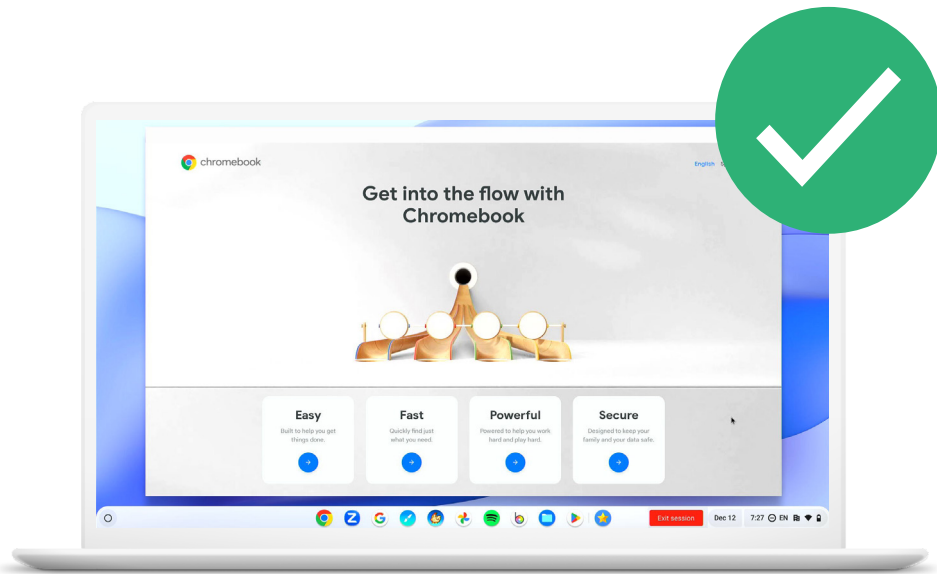

7. The next step is to agree with the terms and conditions.
- You can select or deselect the option to send usage and diagnostic data and click '**Accept to continue**' to continue the setup.

8. After accepting the terms and conditions the device will download the needed resources and start enrolling the device into the Demo Mode.

!!! *If the device is connected to a slow(er) wifi network this step could take a while. Give it some time and make sure to **not** turn off the device.*

Installing the Demo Mode

9. You are now finished, the Demo Mode has successfully been installed.

Powerwash

Table of contents

Powerwashing a Chromebook (Legacy)	Page 20
Powerwashing a Chromebook (New)	Page 24
Powerwashing a ChromeOS Tablet (Legacy)	Page 28
Powerwashing a ChromeOS Tablet (New)	Page 33

Powerwashing a Chromebook (Legacy)

1. First we need to boot the Chromebook into the ChromeOS recovery

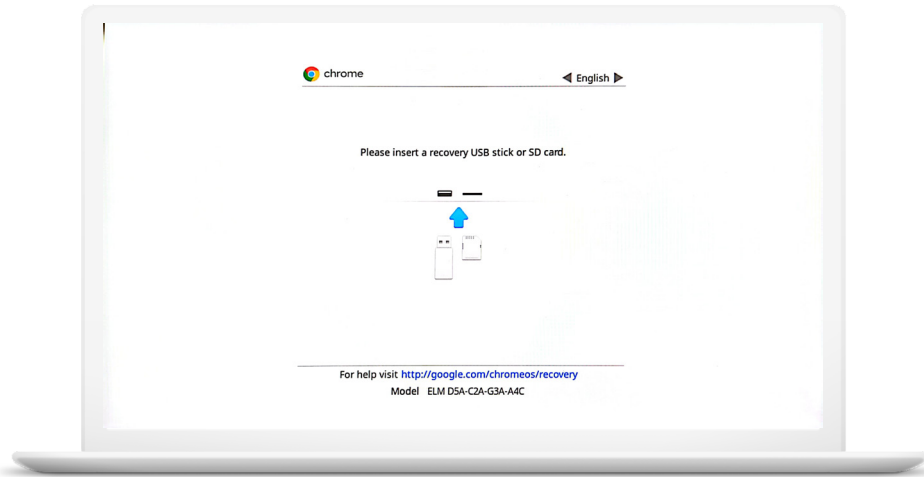

We do this by first **turning off** the Chromebook.

When the Chromebook is turned off you simultaneously press and hold the **ESC (1)** and **Refresh (2)** keys.

Whilst holding these keys you press the **power button (3)** to turn the Chromebook back on.

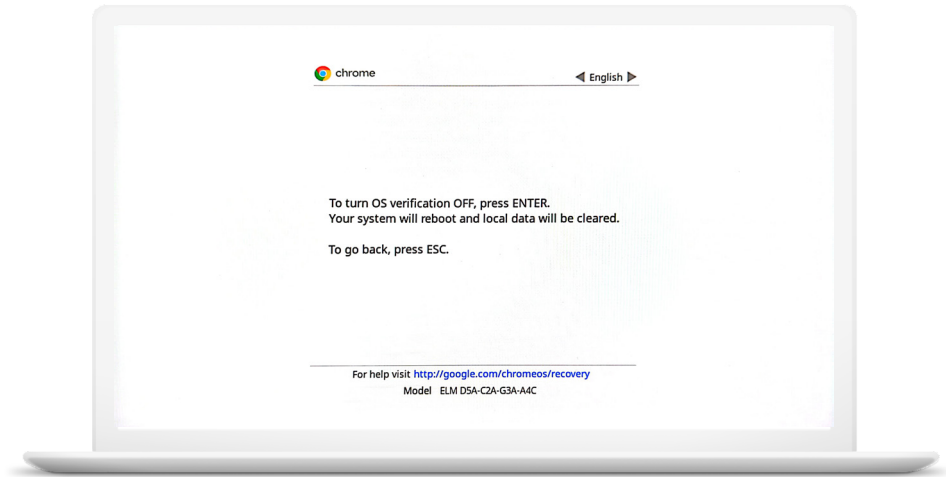

Powerwashing a Chromebook (Legacy)

2. You should now see the ChromeOS Recovery screen.

On the ChromeOS Recovery screen you simultaneously press the **CTRL + ALT + D** keys.

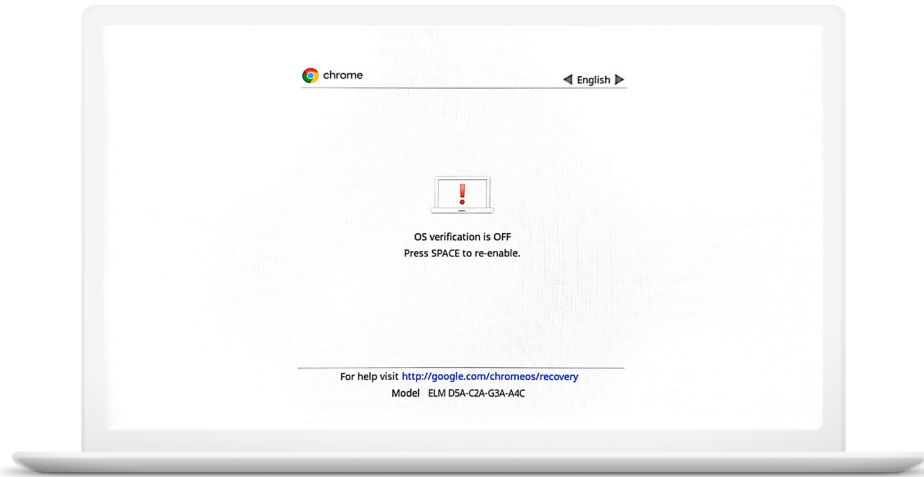

!!! *If ChromeOS is corrupted or damaged you can now use a Recovery USB stick or SD-card to Powerwash and recover the Chromebook (see section X).*

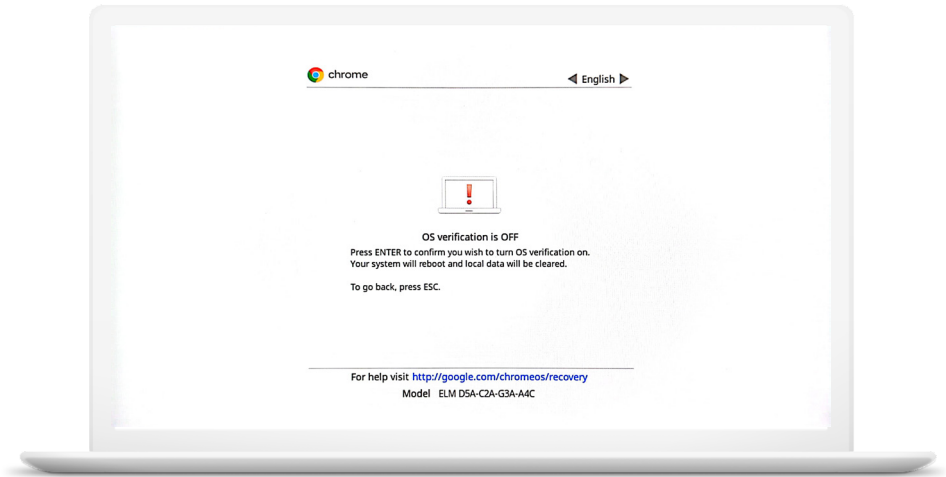

3. The Chromebook will now ask if you want to turn off OS verification.

Confirm this by pressing the **ENTER** key.

Powerwashing a Chromebook (Legacy)

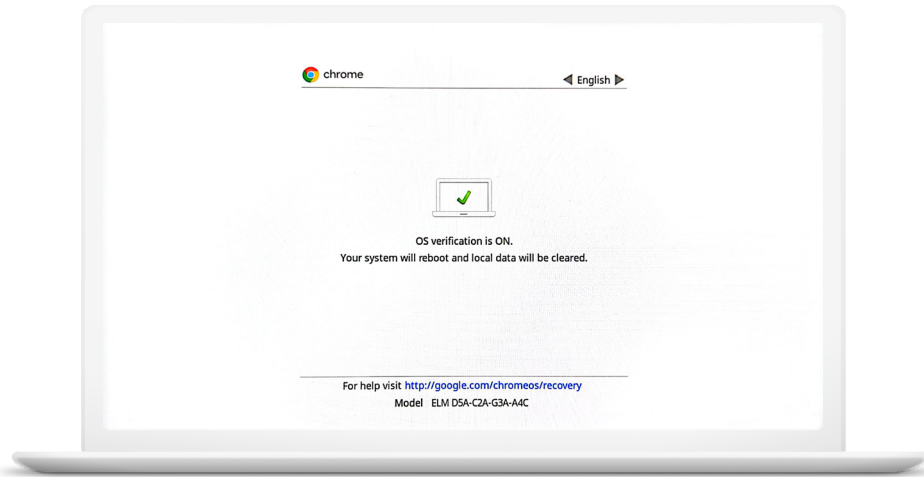

4. OS verification is now turned off.
Press the **SPACEBAR** to re-enable OS verification.

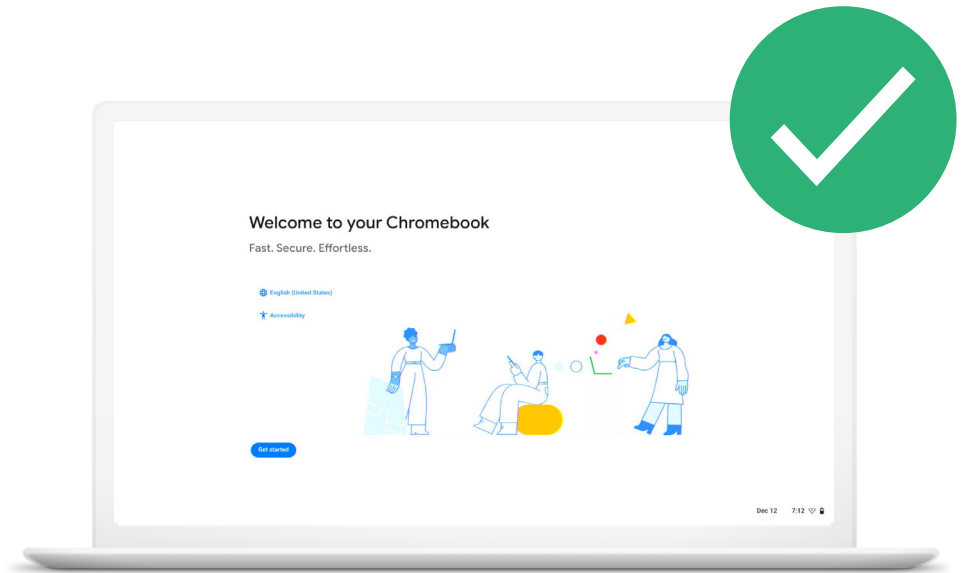

5. On the next screen press **ENTER** to confirm re-enabling OS verification and **clear all local data and settings**.

Powerwashing a Chromebook (Legacy)

6. OS verification is now back on.

The Chromebook will now reboot and wipe all local data and settings.

7. After the process has been completed the Chromebook will boot back up.

The Chromebook is now ready to be setup again.

Powerwashing a Chromebook (New)

1. First we need to boot the Chromebook into the ChromeOS recovery

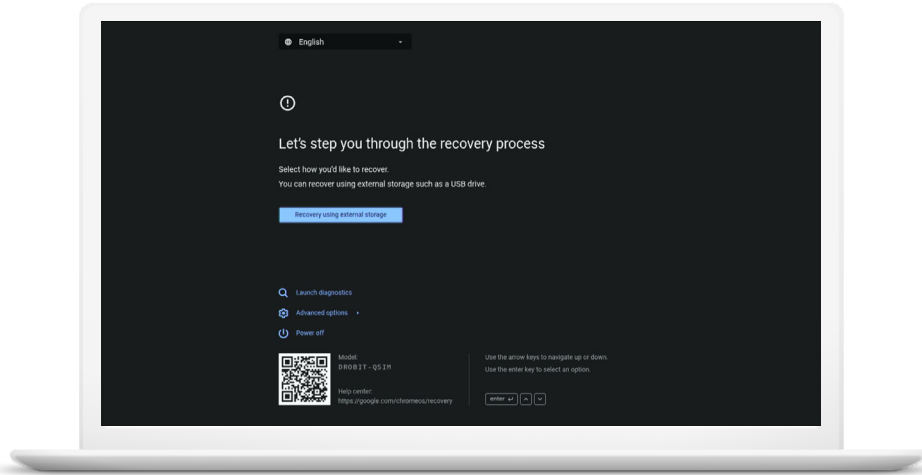

We do this by first **turning off** the Chromebook.

When the Chromebook is turned off you simultaneously press and hold the **ESC (1)** and **Refresh (2)** keys.

Whilst holding these keys you press the **power button (3)** to turn the Chromebook back on.

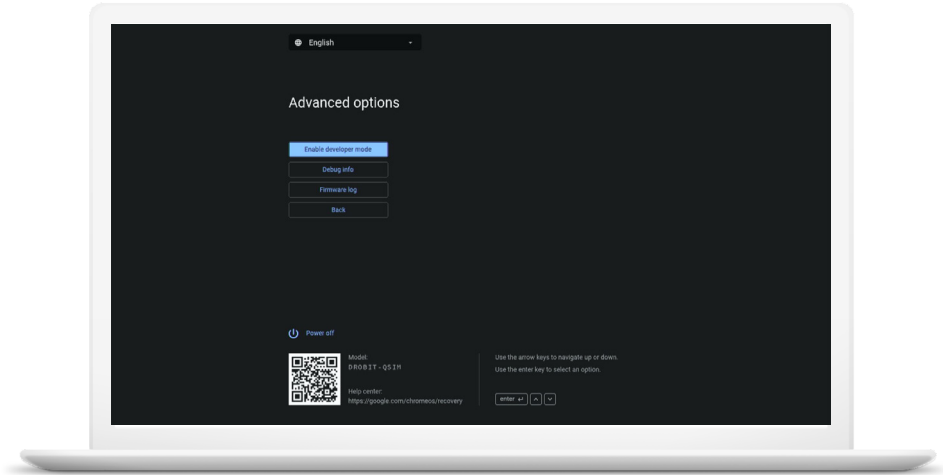

Powerwashing a Chromebook (New)
